Examples of Dissemination Plan Description:
Please note that we expect that each team will submit their work for peer-reviewed presentation within a year of participating in Summer Scholars. These examples are from previously funded proposals, so please be sure to generate a dissemination plan that reflects this coming academic year (e.g., plan to submit to X conference in the fall of 2017 for presentation at annual meeting in spring of 2018).

Humanities-Related Disciplines
Faculty Member: This research will comprise the final part of a chapter I am completing entitled "Battle of the Sexes: Gender and the City in the Song of Songs" that I began in the Summer Scholars program two years ago (2014). That research has been presented at two conferences and is currently submitted to a peer-reviewed journal. This is the last piece of new research that I would like to undertake in order to complete that chapter, which is an argument about the significance of built, public space in the Song of Songs. Together, this work will comprise the final chapter of my book manuscript *Landscapes of the Song of Songs: A Poetics of Place*, which is under contract with Oxford University Press (due in 2017). The student will not be an author on this publication because she will not directly contribute to this written work. In addition to including this research in my book manuscript, I will also submit an abstract for presentation at the Society of Biblical Literature (February of 2017 in St. Paul, MN).

Student: This research will complement and further research already begun in THEO 3380 Women in the Bible. I will submit an abstract to NCUR and to the student section of the Upper Midwest Regional Meeting of the Society of Biblical Literature (February of 2017 in Indiana) and plan to present at the Sr. Seraphim Gibbons Undergraduate Symposium in the spring of 2017.

Arts-Related Disciplines
1) Faculty: I plan to submit my 3D printed apparel product for presentation at the International Textile and Apparel Association annual juried design competition in 2016. Submission Due, June 1, 2016. I also plan to submit this project to “Common Threads 2016.” It will be due in January 2016.
2) Student: I will submit a proposal of the work for consideration to the National Conference on Undergraduate Research, and will participate in the Sr. Seraphim Gibbons Undergraduate Symposium in Spring of 2016. I also plan to submit the 3D printed apparel product for presentation at the International Textile and Apparel Association annual juried design competition in 2016. Submission Due, June 1, 2016
3) Together, we will collaborate to prepare a manuscript for possible publication in International Journal of Fashion Design, Technology and Education. We hope to complete the manuscript by December 1, 2015.

Science-Related Disciplines
We plan to disseminate the work of this project through oral and poster presentations, in the campus community, regional chemistry community, and national venues. In spring 2017, the student will present her work AT LEAST at the Sr. Seraphim Gibbons Undergraduate Symposium and at either NCUR or the Spring 2017
National American Chemical Society conference. I will also encourage the student to present her work at MN Academy of Science Winchell Undergraduate Research Symposium in spring 2017. I will also submit this work to be presented at the Spring 2017 National American Chemical Society conference (student will be co-author). Additionally, we plan to submit our work for publication in a peer-reviewed journal such as Supramolecular Chemistry, Dalton Transactions, or the Journal of Organometallic Chemistry. We will submit a manuscript to one of these journals no later than May of 2017.
